

Features, Benefits & Specifications

Filter Updates and Support for the 3Com X5 Unified Security Platform

To provide protection against new and evolving security threats, it is important that the 3Com X-Family Unified Security Platform has the most recent information about how to thwart these threats.

The Digital Vaccine® Attack Filter Update Service provides updated attack filters which are automatically distributed to all subscribing 3Com X5 and X506 devices, providing pre-emptive protection against new and zero-day vulnerabilities. The Digital Vaccine service offers this protection and prevention on a weekly (or more frequent) basis.

Updates are provided for protection against attacks in four distinct categories:

- signature
- vulnerability
- protocol anomaly
- traffic anomaly.

The 3Com Digital Vaccine Gold Attack Filter Update Service provides one year of Digital Vaccine filter updates, and one year of telephone technical support, advance hardware replacement and software updates for the X-Family device for which it was purchased.

This service also provides an integrated Web content filter subscription service that limits employee access to objectionable or unacceptable websites that could lower productivity or cause legal problems. This protection is kept current because content is filtered through a continually updated database.

If web content filtering is not desired, see the [3Com X5 Digital Vaccine Attack Filter Update Service with Support](#).

- Provides one year of attack filter updates for a 3Com X5 Unified Security Platform
- Updates automatically distributed on a weekly (or more frequent) basis
- Filters updated for signature, vulnerability and protocol and traffic anomalies
- Includes integrated Web content filter subscription service, filtered through a continually updated database
- Also provides one year of telephone technical support, advance hardware replacement and software updates for the 3Com X-Family device for which it was purchased

Product Specifications

- Update process: automatically distributed to all subscribing 3Com X5 and X506 devices
